

PAMBAYESIAN

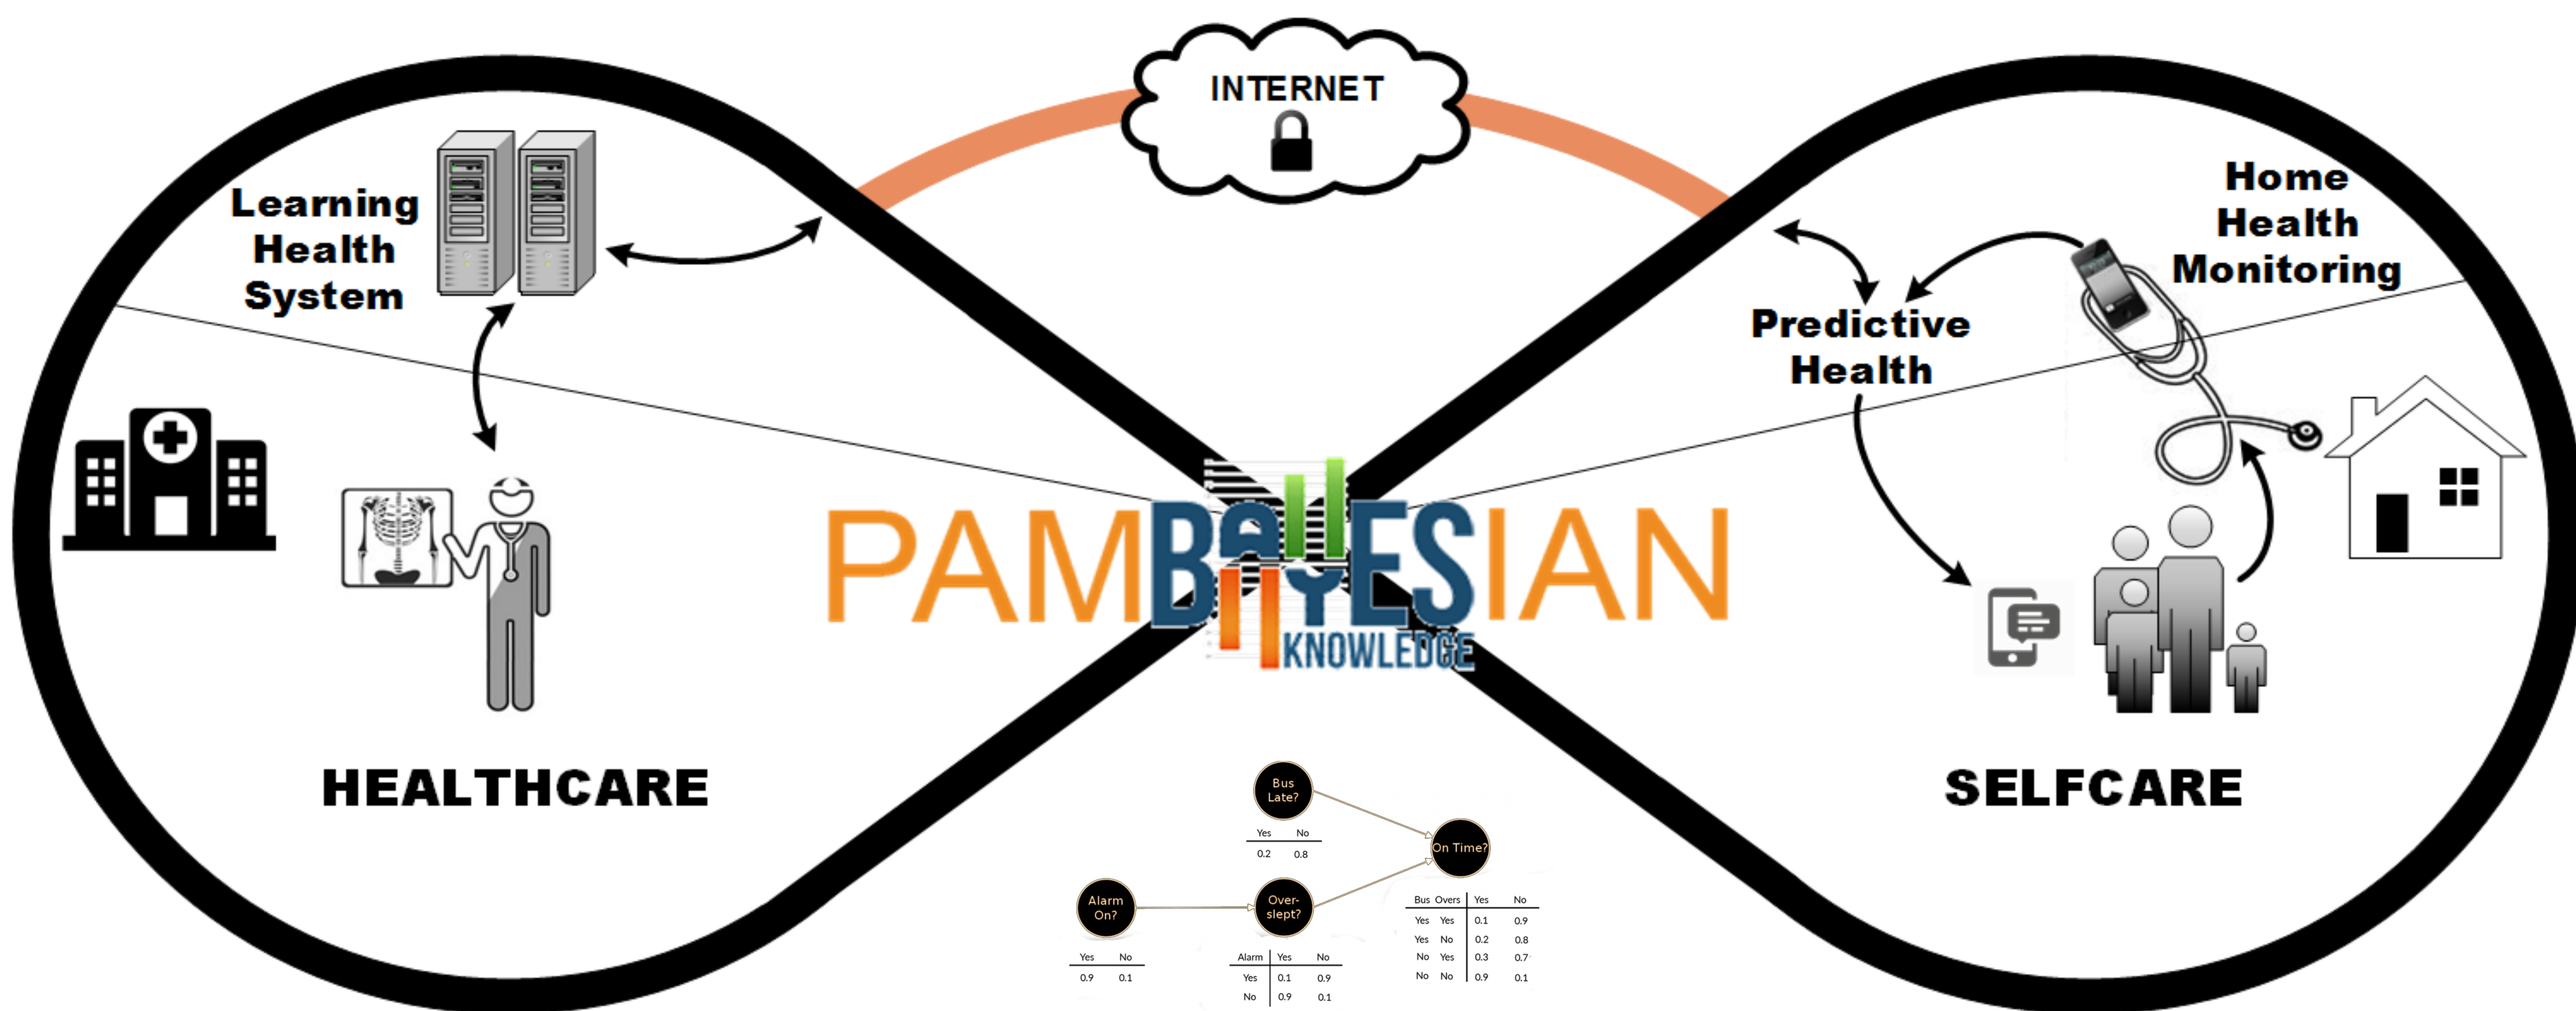

Patient Managed decision-support using Bayesian Networks

Can we reduce clinical overuse?

We can if we empower patients to:

- Be aware of their current health state
- Actively participate in their own healthcare delivery
- Make supported clinical decisions in the home.
- Be more independent
- Be less reliant on direct consultation

PAMBAYESIAN is developing:

- Easy to use medical decision support tools
- In consultation with clinicians
- For direct patient use
- To monitor chronic conditions
- In real time
