

Gestational Diabetes case study

Mariana Ranieri

Process of BN development

Decision Points

1. Diagnosis of GDM at screening.
2. Care pathway (community vs. hospital).
3. Initiation and titration of diabetes therapy.
4. Delivery decision.
5. Prediction and management of postpartum type 2 diabetes risk.

Prediction v Decision

- What information?
- Reasoning?

Decision points for Diagnostic of GDM

Diagnostic Decision

Almost everyone screened

- Decide on blood test
- No test, one test, combined test
- Diagnosis following test
- One or two stages

Blood Test Results Available

Risk Factors?

Rf = 0

Rf ≥ 1

HbA1c < 41 and or Random Blood Glucose < 7

Assess

Bloods with RPG & HbA1c

HbA1c ≥ 41 or RPG ≥ 7

Assess Blood Test Results

Normal

Assess Week 16 OGTT results

OGTT ≥ 5.6 Fasting or ≥ 7.8 at 2Hr

OGTT < 5.6 Fasting and < 7.8 at 2Hr

Assess Week 24 OGTT results

OGTT > 5.6 Fasting and ≥ 7.8 at 2Hr

OGTT ≤ 5.6 Fasting or < 7.8 at 2Hr

Assess Week 24 RPG results

RPG ≥ 7

RPG < 7

Probable Pre-existing DM

Positive Diagnosis

Refer to GDM Team

Routine Care

Lab Test Results

Lab Test Results

Lab Test Results

Non-Diagnosis

Diagnosis

Risk factors

Test results

Predict: GDM

Use:

Initially risk factors only

... Then with added test

Diagnostic BN

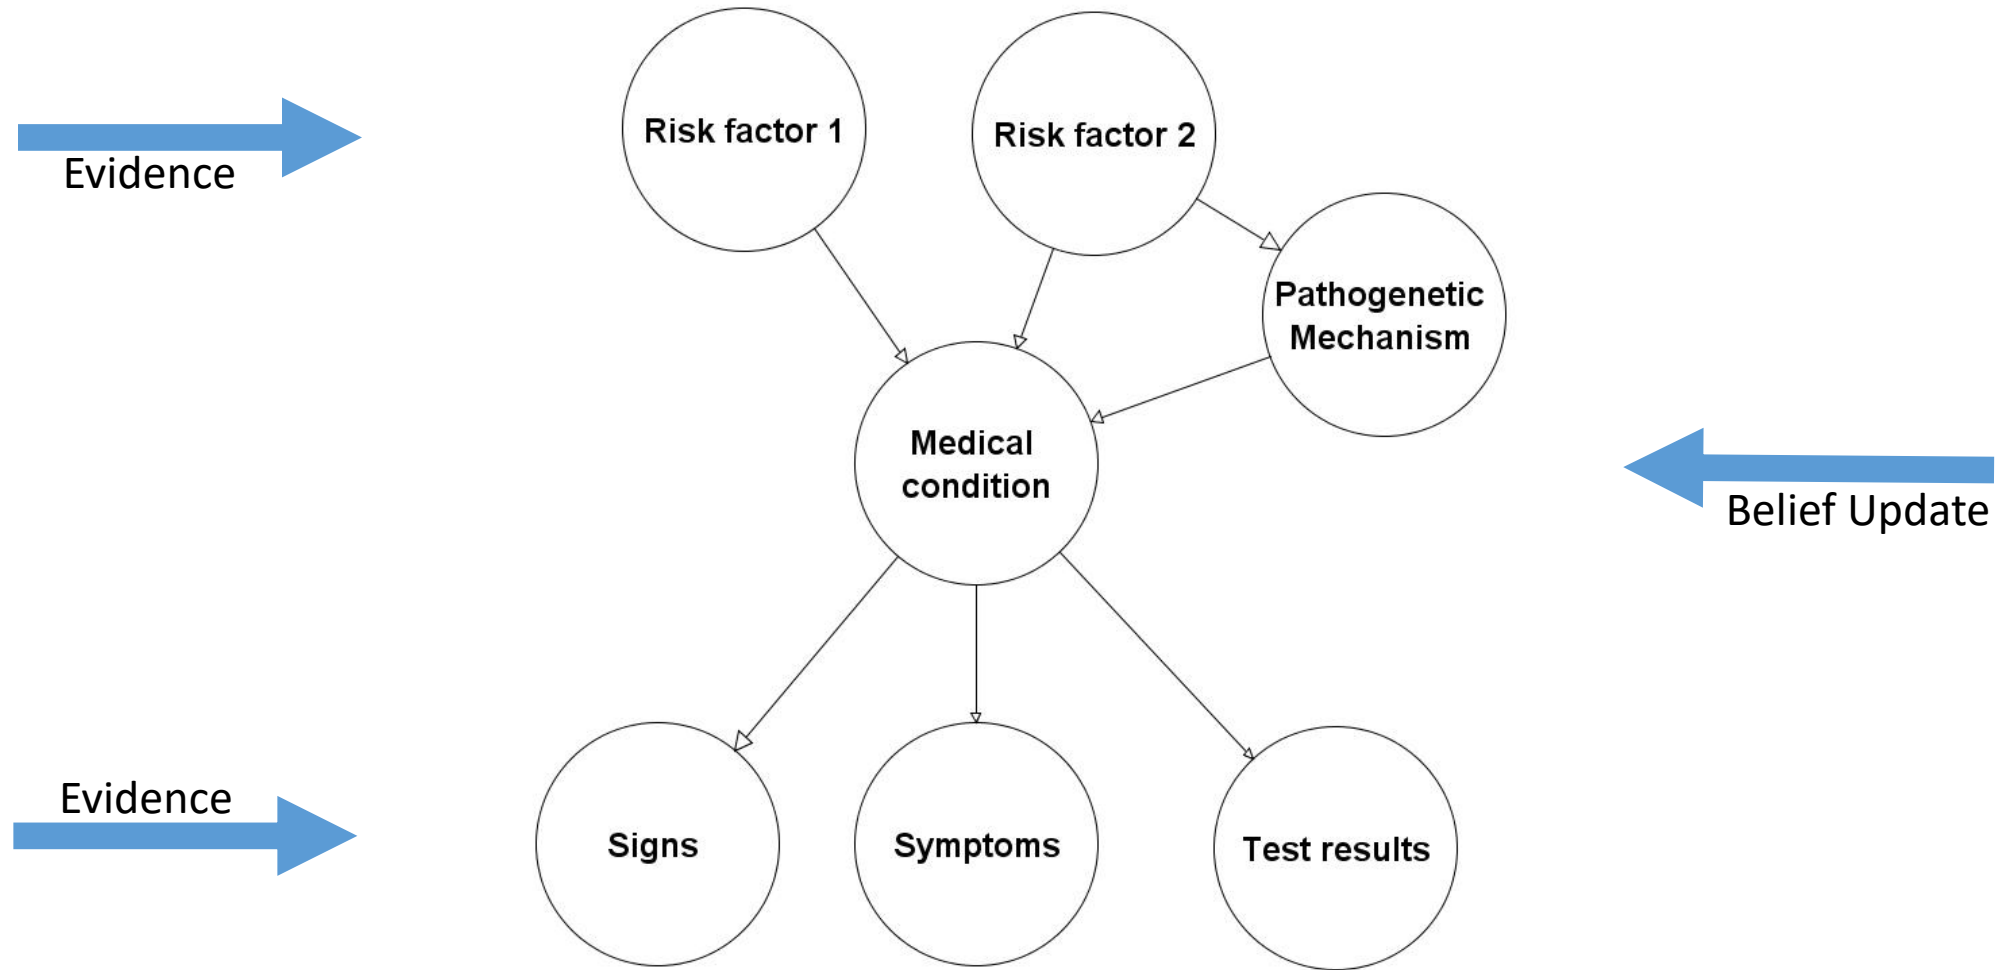

- Inputs
 - Risk factors
 - Test results
- Predict: GDM
- Use:
 - Initially risk factors only
 - ... Then with added test

Diagnostic Reasoning with a Bayesian Network

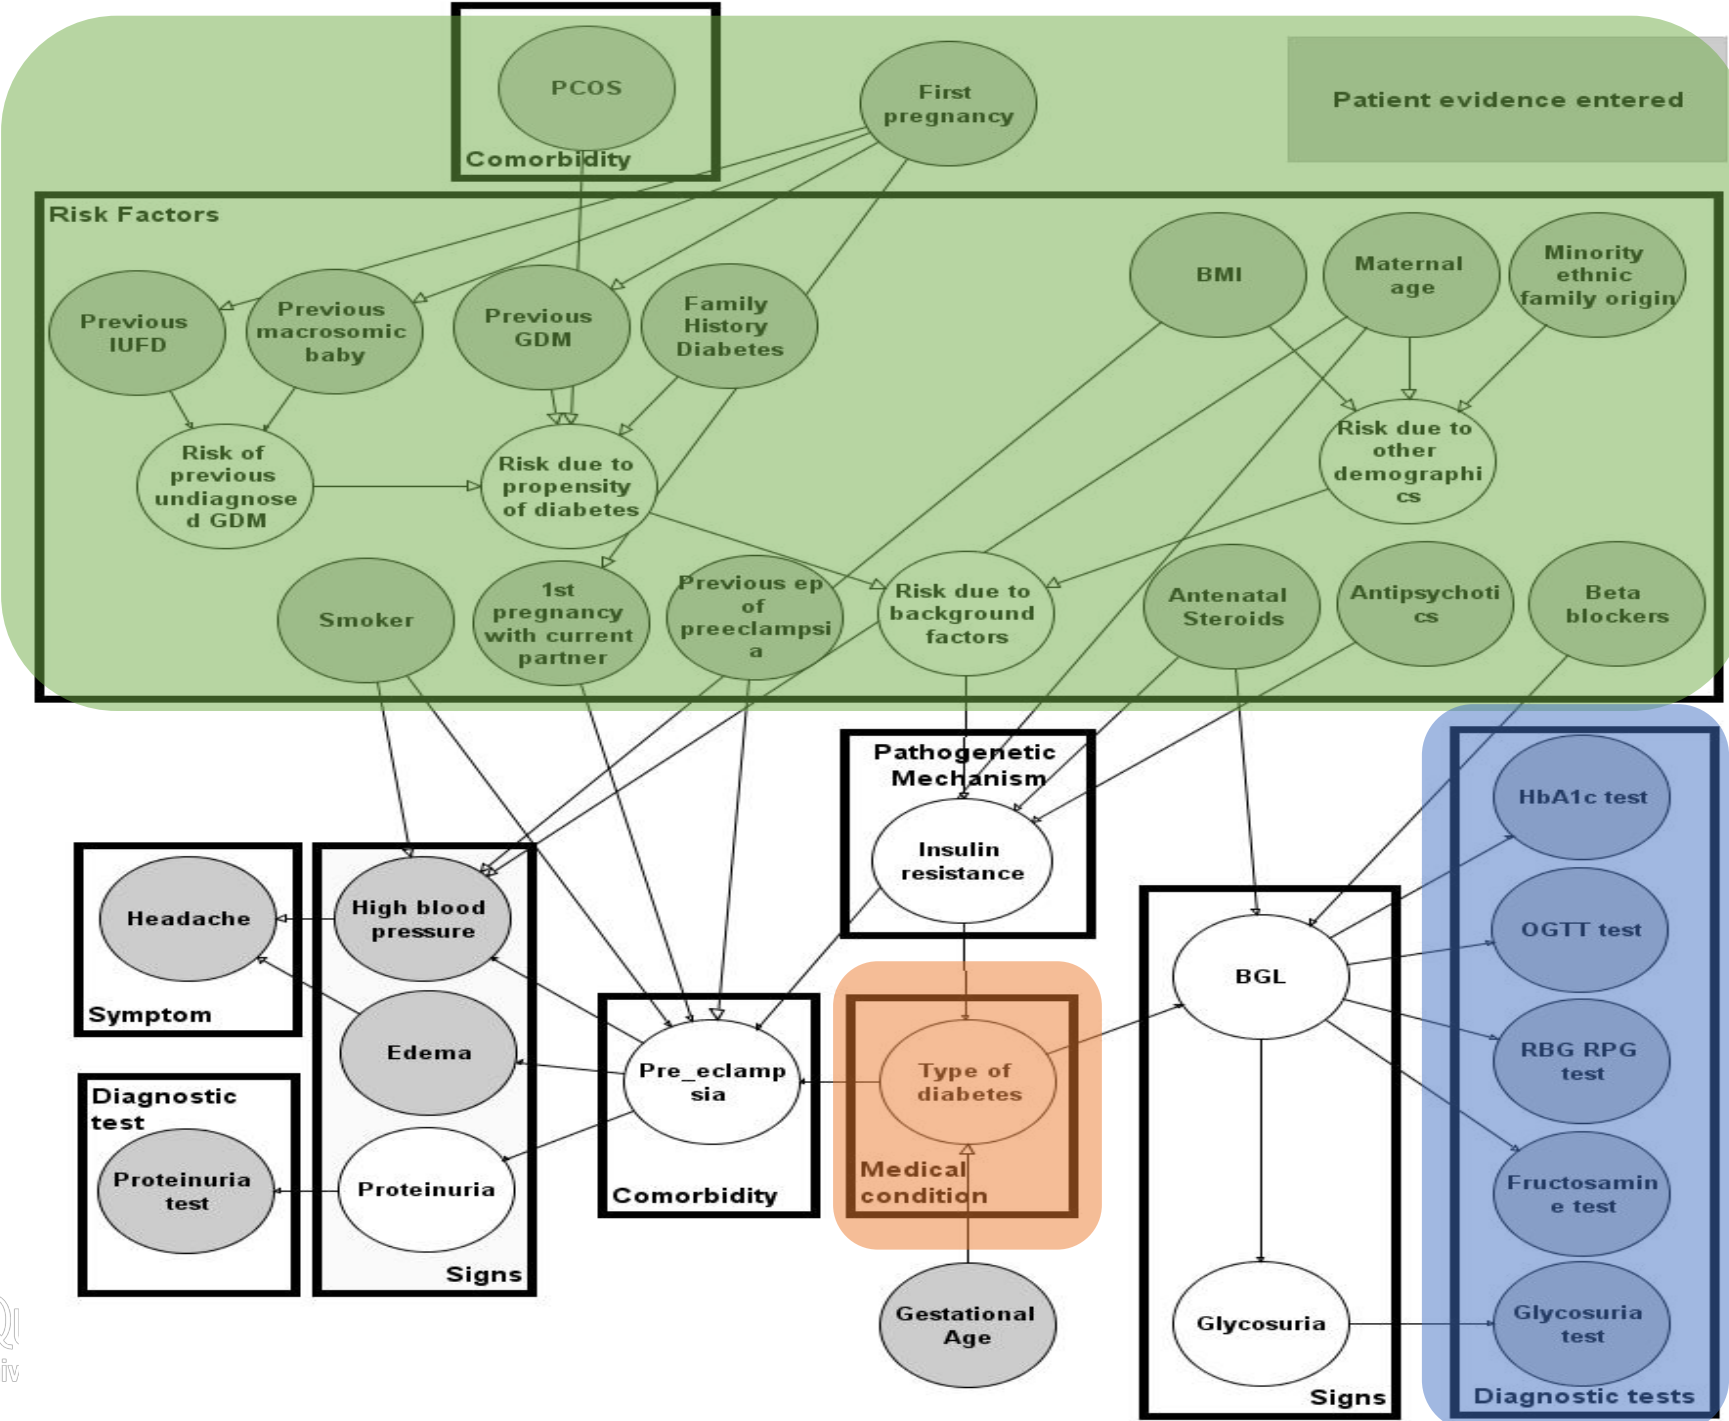

Diagnostic BN

Risk Factors

Test results

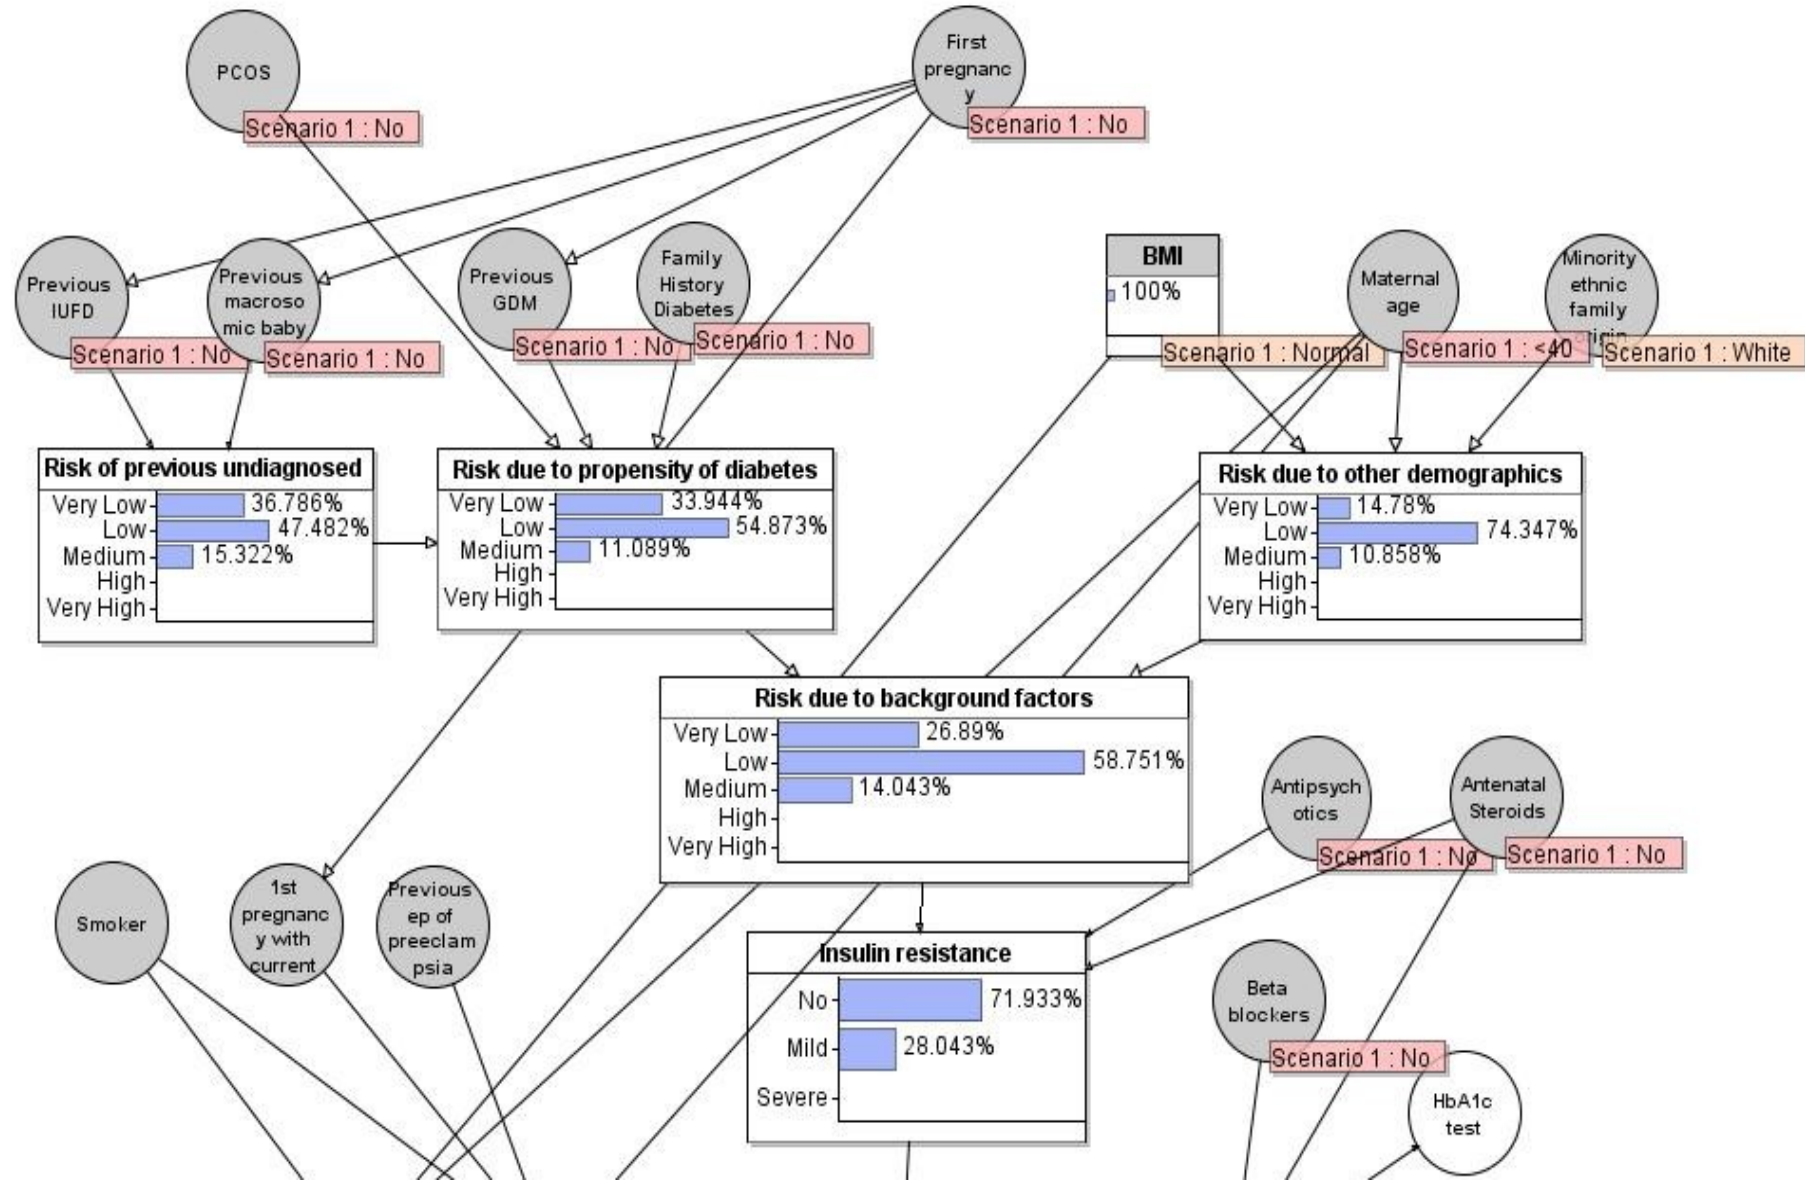

Prediction

Diagnostic BN use

Mrs Windsor, 28 years old
(Low Risk Patient)

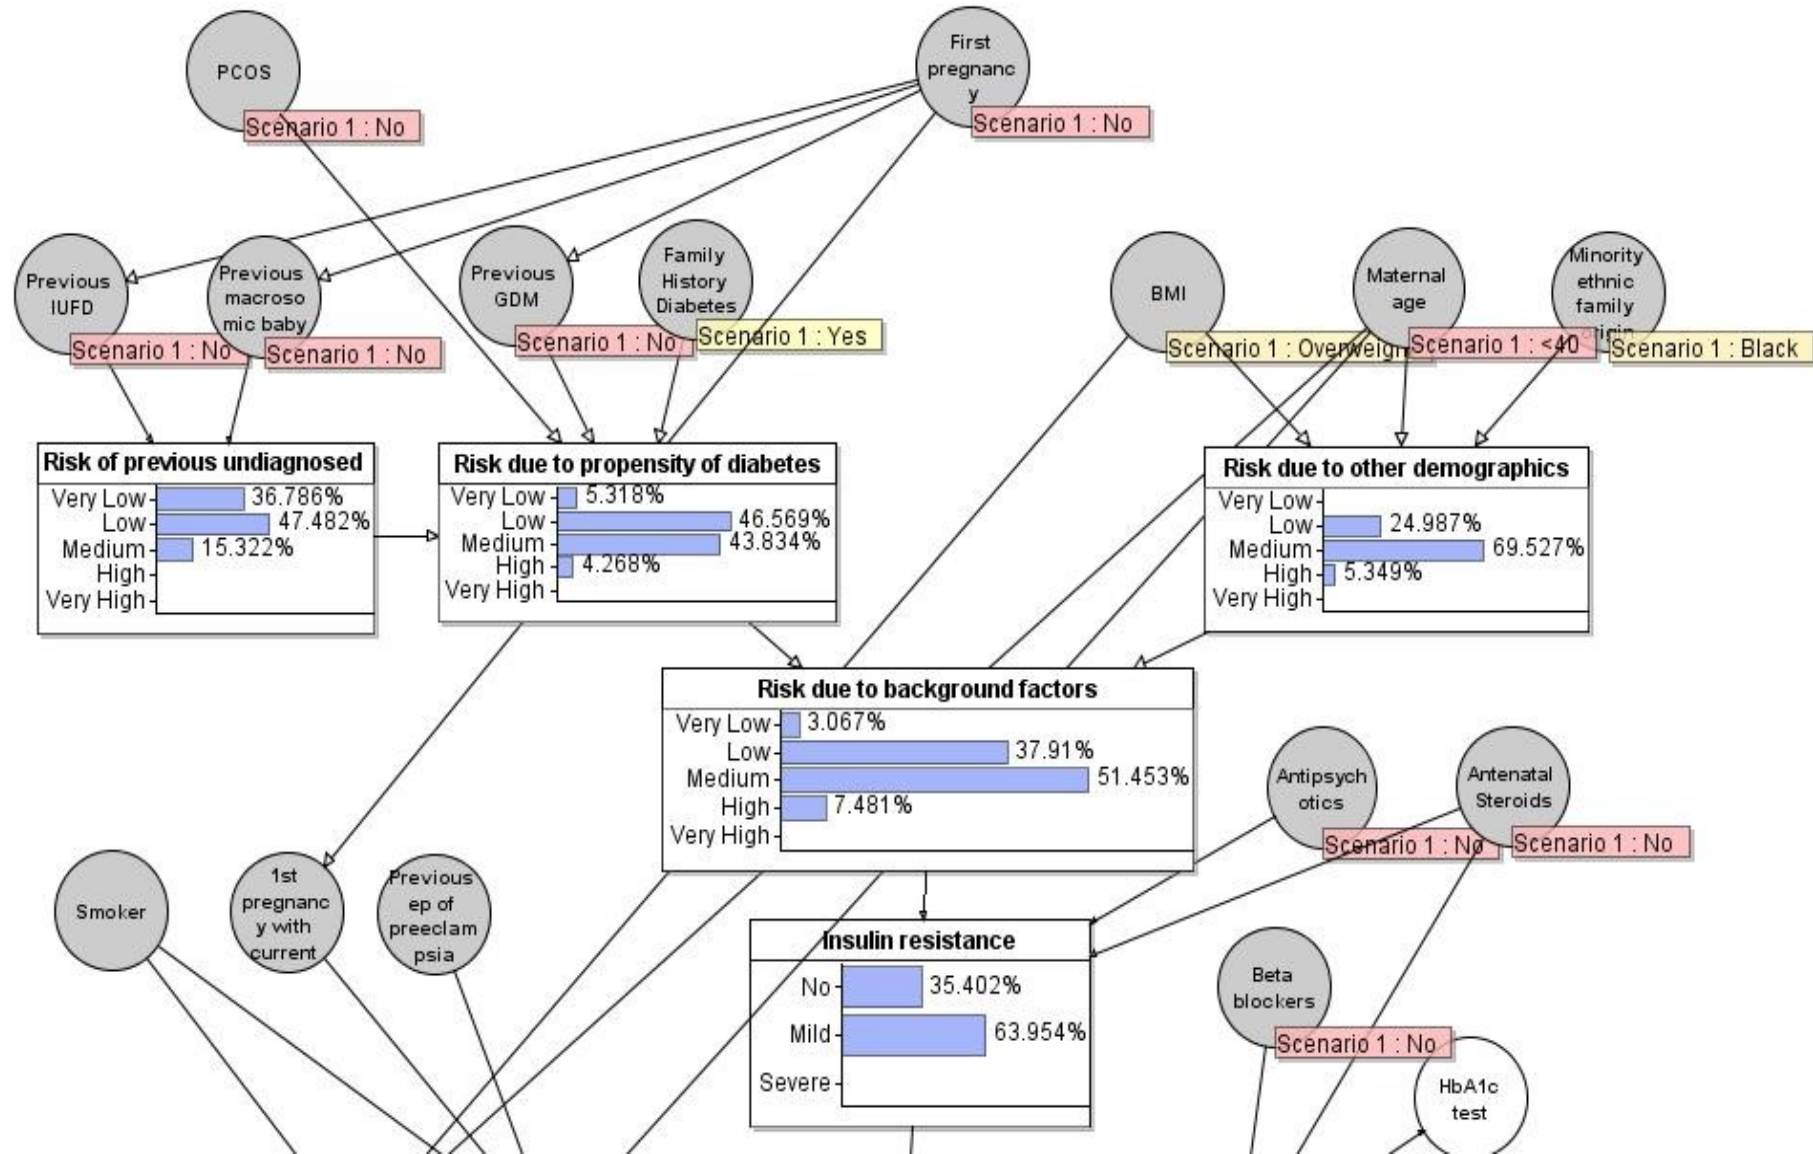

No PCOS
No previous IUFD
No macrosomic baby
No previous GDM
No FH of diabetes
Normal weight
White
No Antipsychotics
No Antenatal Steroids
No Beta blockers

Diagnostic BN use

Ms Dube, 25 years old
(moderate Risk Patient)

No PCOS
No previous IUFD
No macrosomic baby
No previous GDM
Diabetic mother
Overweight
Black
No Antipsychotics
No Antenatal Steroids
No Beta blockers

Diagnostic BN use

Mrs Begum, 28 years old
(High Risk Patient)

No PCOS

No previous IUFD

No macrosomic baby

Previous GDM

Diabetic mother

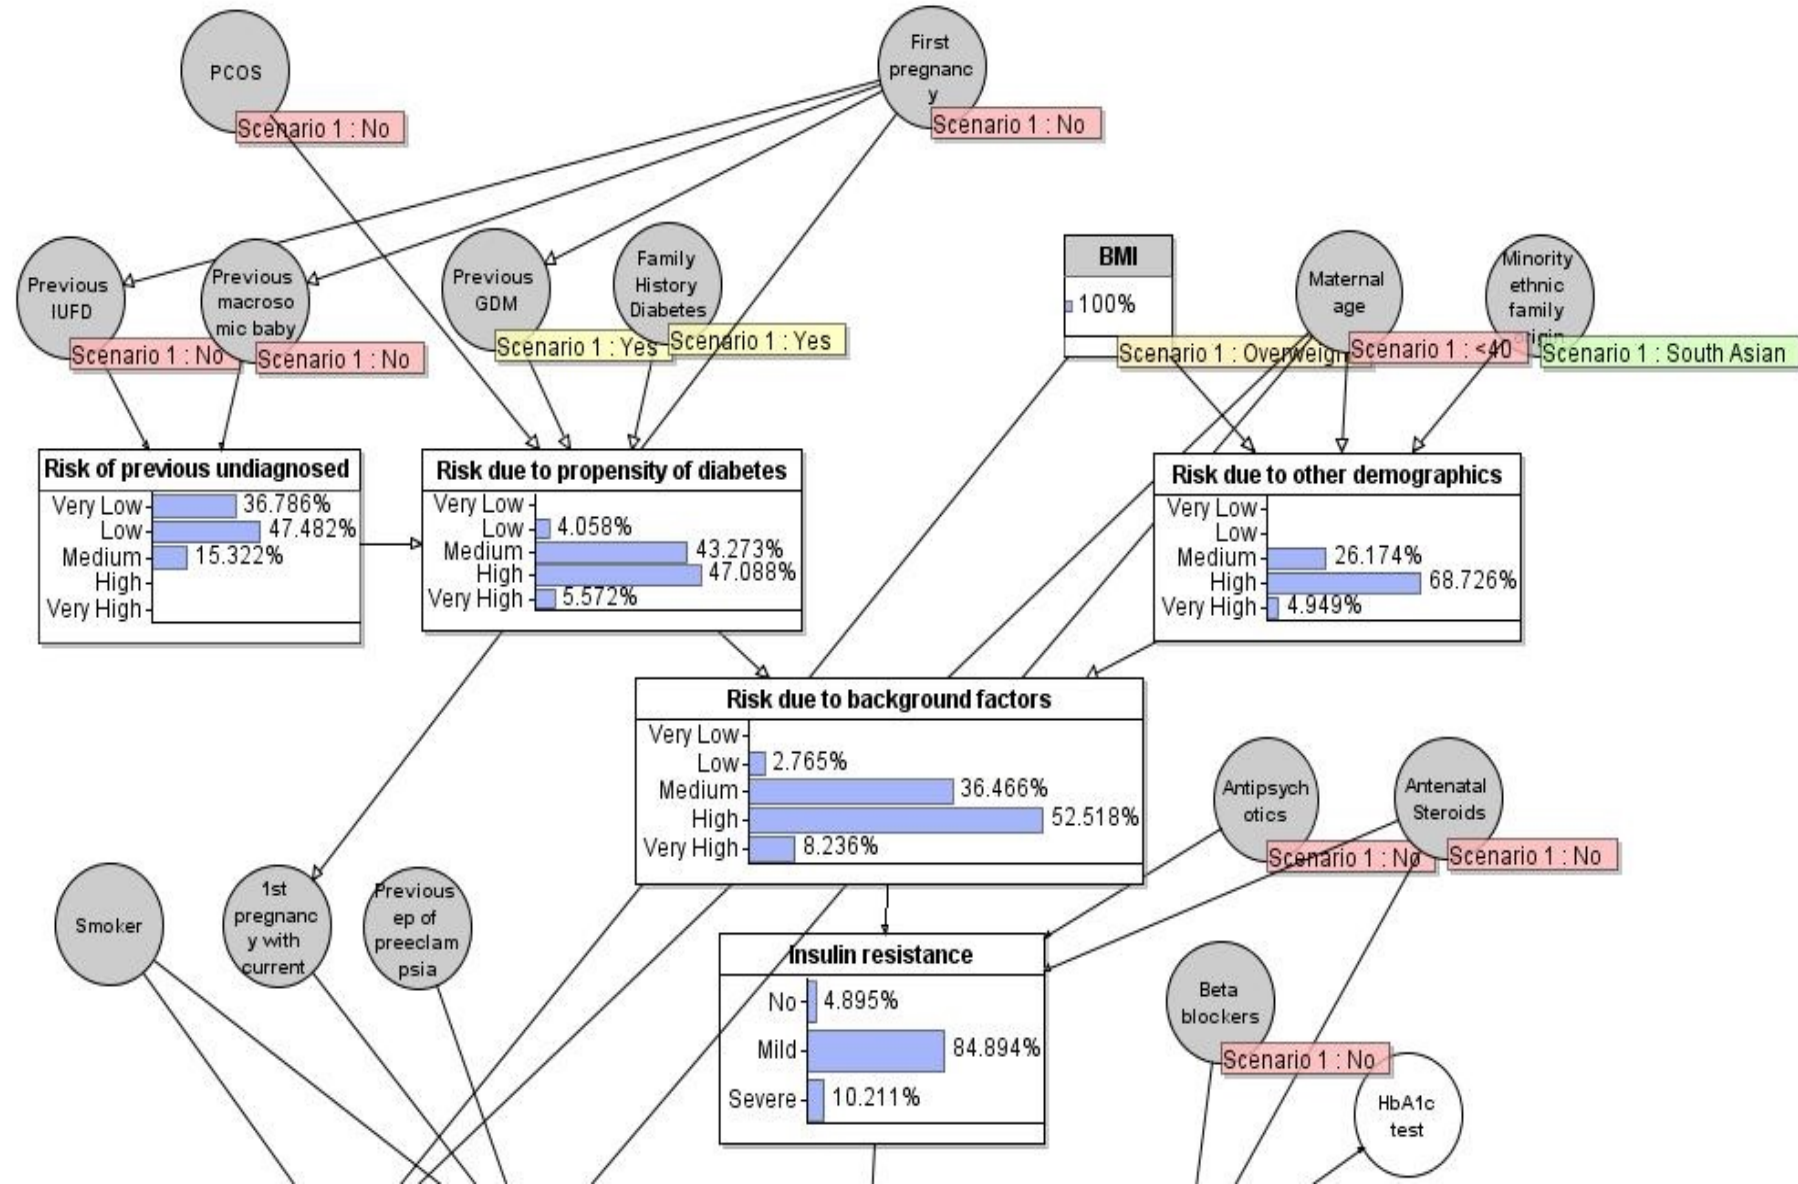

Overweight

South Asian

No Antipsychotics

No Antenatal Steroids

No Beta blockers

Summary of Progress and Future work

- BN development in stages
 - Decision points
 - Initial diagnostic BN nearing completion
 - ... applicable to later stages
- Initial work on 'treatment' BN
- Diagnostic BN
 - Training with data
 - Evaluate performance and refine
- Treatment BN
 - Elicitation of additional structure
- Plans for self-management BN
